Experience

Android App Development Intern | Uplifty AI *Feb 2026 - Apr 2026*

- Modeled relational datasets for completion records, reward transactions, and user achievements across **10+ product components**, creating structured data for reporting and downstream analysis.
- Improved business-rule consistency and reduced duplicate validation logic by **25%** by developing reusable workflows for reward eligibility, verification checks, and activity-based rules.
- Translated product and operational requirements into validated data structures for achievement and rewards tracking, improving consistency across user activity and reporting workflows.

Research Assistant | Binghamton University *Sept 2025 - Jan 2026*

- Reduced manual analysis time by **30%** by developing Python ETL workflows to ingest, clean, combine, transform, and validate large-scale research datasets for repeatable analysis and reporting.
- Improved experimentation cycle time by **20%** by building configurable analytics modules with parameterized weighting logic, standardized preprocessing, and automated data-quality checks.
- Developed dashboards and analytical visualizations to identify trends, compare results, investigate data inconsistencies, and communicate actionable research findings to stakeholders.

Software Engineering and Data Intern | Global Health Impact *May 2025 - Sept 2025*

- Reduced manual healthcare data processing by **30%** by building Python ETL pipelines to clean, combine, validate, and standardize multi-sheet WHO datasets covering HIV, TB, and neglected tropical diseases.
- Analyzed DALYs, treatment coverage, drug efficacy, and country-level health indicators to identify trends and support comparative evaluation of healthcare outcomes across populations.
- Improved analytical reproducibility by standardizing spreadsheet-to-Python workflows for impact-score calculations, data validation, recurring research reporting, and stakeholder review.

Data Analyst | R&P Consultants *Apr 2023 - Apr 2024*

- Automated recurring production and inventory reporting using **MySQL, Python, and Excel**, replacing manual spreadsheet preparation and improving the efficiency of weekly management reporting.
- Cleaned, combined, validated, transformed, and analyzed production, inventory, procurement, and machine-utilization data to improve reporting consistency and identify operational trends.
- Developed Excel KPI dashboards for production output, inventory levels, and machine utilization, supporting management reviews, inventory planning, and operational decision-making.

Projects

Sales Performance Dashboard | SQL, Python, Excel, Power BI

- Analyzed **112K+ order items** and **99K+ e-commerce orders** using SQL, Python, Pandas, and Excel to evaluate revenue, customer behavior, delivery performance, and product-category trends.
- Developed an interactive Power BI dashboard with DAX measures for revenue, average order value, late-delivery rate, review score, repeat-customer rate, and category revenue contribution.

F1-InsightX | PostgreSQL, SQL, Supabase [\[Website\]](#) [\[GitHub\]](#)

- Analyzed **369K+ laps**, **13K+ race results**, and **48K+ stint records** to identify performance trends and compare driver pace, position changes, stint strategy, and team-level results.
- Built validated analytical views across **663 sessions** and **54 race analyses**, transforming PostgreSQL data into interactive visualizations for performance, strategy, weather, and standings analysis.

Technical Skills

Data Analytics & BI: SQL, Python, Excel (Pivot Tables, VLOOKUP/XLOOKUP), Power BI, Tableau, DAX, Pandas, NumPy, ETL, Data Cleaning, Data Validation, Data Transformation, KPI Reporting, Data Visualization

Databases & Tools: PostgreSQL, MySQL, MongoDB, Azure, Git, GitHub

Education & Certifications

Binghamton University, SUNY	Binghamton, NY
<i>M.S. in Computer Science</i>	<i>Expected Sept 2026</i>
Microsoft Certified: SQL AI Developer Associate [Verify]	<i>Aug 2026</i>
Microsoft Certified: Fabric Analytics Engineer Associate [Verify]	<i>Aug 2026</i>
