Experience

Uplifty AI

Android App Development Intern

Remote - Austin, TX

Feb 2026 – Apr 2026

- Designed and implemented backend services for a challenge-reward platform, orchestrating completion events, reward eligibility, and progression workflows across **10+ distributed components**.
- Built reusable service modules for reward computation, validation pipelines, and activity-based gating, improving business-rule consistency and reducing duplicate logic by **25%**.
- Modeled relational data schemas for completion records, rewards ledger events, and user achievements, enabling scalable state management and downstream analytics workflows.

Binghamton University

Research Assistant

Binghamton, NY

Sept 2025 – Jan 2026

- Developed backend-driven ETL pipelines and data processing workflows to ingest, transform, and visualize large-scale datasets, reducing manual analysis time by **30%**.
- Designed configurable data processing modules with parameterized weighting logic, improving experimentation cycle time by **20%** and enabling flexible model evaluation.
- Implemented robust ingestion and preprocessing pipelines for structured data transformation, improving pipeline reliability, repeatability, and data consistency.

Global Health Impact

Software Engineering and Data Intern

Binghamton, NY

May 2025 – Sept 2025

- Developed **RESTful APIs** for backend services, improving request handling efficiency and reducing latency by **20%**.
- Automated ETL pipelines in **Python** for data ingestion and transformation, reducing manual processing by **30%**.
- Integrated frontend clients with backend APIs, improving request handling reliability and data consistency across services.

Mehta Enterprise

Software Developer Intern

Pune, India

Aug 2023 – Apr 2024

- Designed a MySQL-backed inventory system with optimized queries for real-time tracking and efficient data retrieval.
- Developed backend workflows for event-driven low-stock alerting, improving monitoring efficiency and reducing manual intervention across inventory operations.
- Implemented transactional billing workflows with validation checks, ensuring data consistency and reducing processing errors across billing operations by **20%**.

Projects

F1-InsightX - Next.js, TypeScript, Supabase [\[GitHub\]](#)

Mar 2026

- Engineered a data-intensive analytics platform using **Next.js**, **TypeScript**, and **Supabase**, supporting real-time ingestion and querying of race datasets.
- Designed **REST APIs**, caching layers, and optimized query pipelines to enable scalable backend workflows, reducing redundant fetches and improving latency by **25%**.

Automated VAR System - YOLOv8, OpenCV, ByteTrack [\[GitHub\]](#)

Aug 2025

- Built a multi-camera data processing pipeline using **YOLOv8** and **ByteTrack** for real-time object detection and tracking.
- Implemented multi-stage data processing and transformation pipeline for spatial normalization across camera inputs.

Document-Based AI Assistant - FastAPI, FAISS, llama.cpp [\[GitHub\]](#)

May 2025

- Developed a FastAPI-based backend service for semantic retrieval using FAISS, enabling low-latency query processing with sub-second inference.

Technical Skills

- Languages:** Python, C++, SQL, JavaScript
- Backend:** FastAPI, Flask, Django, REST APIs, Microservices, Supabase
- Databases:** PostgreSQL, MySQL, MongoDB
- Systems & Tools:** Docker, Git, Linux, Redis, CI/CD, Unit Testing, Integration Testing
- Data / ML:** Pandas, NumPy, FAISS, ETL Pipelines, Data Processing
- Concepts:** Data Modeling, Data Structures, Algorithms, Distributed Systems, Scalability, Latency Optimization

Education

Binghamton University, SUNY

M.S. in Computer Science

Binghamton, NY

Expected May 2026
